JORDAN MCGEE

Software Development • Cloud & AI • Industrial Technology
Anderson, SC | github.com/1tz-j0rdan

PROFESSIONAL SUMMARY

Computer scientist and engineering leader pursuing a master's degree in Computer Science. Experienced in Python automation, REST API development, PostgreSQL, software testing, and industrial electrical/control systems. Lead a seven-person electrical division and deliver practical technical solutions across engineering teams.

TECHNICAL SKILLS

Programming: Python, C, C++, C#, Java, R, SQL

Backend & Tools: FastAPI, REST APIs, SQLAlchemy, PostgreSQL, Alembic, Docker, Git/GitHub, pytest, Ruff, CI workflows

Engineering & Data: Power BI, Excel, Altium, MATLAB/Simulink, SolidWorks, AutoCAD, PCB design, telemetry

SELECTED SOFTWARE PROJECTS

AssetOps Maintenance API | Python • FastAPI • PostgreSQL • Docker • Alembic

- Built an industrial asset/work-order REST API with API-key security, status-transition rules, SQLAlchemy persistence, schema migrations and 15 passing automated tests.
- Verified persistent PostgreSQL storage, repeatable migration setup, and clean Ruff lint/format checks; source: github.com/1tz-j0rdan/assetops-maintenance-api

Reusable Python Utility Package | Python • Packaging • Developer Tooling

- Organized reusable Python utilities into a structured, version-controlled package with automated developer checks.

File Organizer | Python • File-System Automation

- Built a command-line file-management utility with 21 passing tests and clean Ruff checks.

EXPERIENCE

Electrical Division Lead | Clemson Formula Racing | Oct 2024 – Present

- Lead seven electrical-team members within a roughly 50-person engineering organization; manage budget, schedules and weekly team meetings.
- Coordinate PCB design, wiring harnesses, telemetry, power systems, controls integration and vehicle troubleshooting.

Construction Engineering Aide III Intern | Fluor Corporation | May 2024 – Aug 2024

- Supported electrical and control systems work on the Savannah River Plutonium Processing Facility project.
- Developed Python/C# workflow automation saving approximately 300 labor hours and over $6,500.
